Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-4,7-10,14-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Birrell et al .

Birrell et al discloses an elliptical exerciser comprising foot supports having 152 flexible deflecting means, and elliptical movement means. Spring 52 is broadly considered a leaf spring.

As to claim 14, note the foot pad 76 (figure 1) which would be applicably applied to the figures 4-5 embodiments.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-19 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Whan-tong et al in view of Vittone and Birrell et al.

Whan-Tong et al shows all of applicant's claimed invention with the exception of a leaf spring.

Application/Control Number: 09/943,741

Art Unit: 3764

Birrell et al teaches the use of a spring in an elliptical trainer for providing asymmetrical and uncoordinated motion.

Vittone discloses a device which simulates walking, stair climbing and other motions, and which appears to be capable of generating a rough elliptical motion.

Vittone uses leaf springs in all embodiments including figures 7-8 which disclose a structure very similat to a conventional elliptical trainer.

In view of the Birrell et al and Vittone teachings, it would have bene obvious to one skilled in the art to substitute the Vittone type leaf springs for the Whan – Tong foot supports for achieving asymmetrical motion as taught and desired by Birrell et al.

As to claim 20, note figure 15 which discloses telescoping arm supports, which could be employed in the figure 13 embodiment.

Claim Rejections - 35 USC § 112

5. Claim 17 is recites the limitation "said foot engagement pads" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim. The dependency should be changed from "10" to --14--.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosureAny inquiry concerning this communication or earlier communications from the examiner should be directed to Steve R Crow whose
